

Exam AZ-104: Microsoft Azure Administrator

Introduction

Microsoft Azure Administrator (AZ-104 exam) training program provides an opportunity for professionals to get a deep understanding of the entire administrative lifecycle in Azure environments. This Azure course demonstrates candidates in techniques in regards to how to maintain services related to computing, storage, network, and security. Thereby, the candidates learn Azure Administrator skills and also prepare to score well in the AZ-104 Azure Administrator exam.

Course Outline

MODULE 1: Manage Azure identities and governance (15-20%)

- Manage Azure Active Directory (Azure AD) objects
 - create users and groups
 - create administrative units
 - manage user and group properties
 - manage device settings
 - perform bulk user updates
 - manage guest accounts
 - configure Azure AD join
 - configure self-service password reset
- Manage role-based access control (RBAC)
 - create a custom role
 - provide access to Azure resources by assigning roles at different scopes
 - interpret access assignments
- Manage subscriptions and governance
 - configure Azure policies
 - configure resource locks
 - apply and manage tags on resources
 - manage resource groups
 - manage subscriptions
 - manage costs
 - configure management groups

MODULE 2: Implement and manage storage (15-20%)

- Secure storage
 - configure network access to storage accounts
 - create and configure storage accounts
 - generate shared access signature (SAS) tokens
 - manage access keys
 - configure Azure AD authentication for a storage account
 - configure access to Azure Files
- Manage storage
 - export from Azure job
 - import into Azure job
 - install and use Azure Storage Explorer
 - copy data by using AZCopy
 - implement Azure Storage replication
 - configure blob object replication
- Configure Azure files and Azure Blob Storage
 - create an Azure file share

- create and configure Azure File Sync service
- configure Azure Blob Storage
- configure storage tiers
- configure blob lifecycle management

MODULE 3: Deploy and manage Azure compute resources (20-25%)

- Automate deployment of virtual machines (VMs) by using Azure Resource Manager templates
 - modify an Azure Resource Manager template
 - configure a virtual hard disk (VHD) template
 - deploy from a template
 - save a deployment as an Azure Resource Manager template
 - deploy virtual machine extensions
- Configure VMs
 - configure Azure Disk Encryption
 - move VMs from one resource group to another
 - manage VM sizes
 - add data disks
 - configure networking
 - redeploy VMs
 - configure high availability
 - deploy and configure scale sets
- Create and configure containers
 - configure sizing and scaling for Azure Container Instances
 - configure container groups for Azure Container Instances
 - configure storage for Azure Kubernetes Service (AKS)
 - configure scaling for AKS
 - configure network connections for AKS
 - upgrade an AKS cluster
- Create and configure Azure App Service
 - create an App Service plan
 - configure scaling settings in an App Service plan
 - create an App Service
 - secure an App Service
 - configure custom domain names
 - configure backup for an App Service
 - configure networking settings
 - configure deployment settings

MODULE 4: Configure and manage virtual networking (25-30%)

- Implement and manage virtual networking
 - create and configure virtual networks, including peering
 - configure private and public IP addresses
 - configure user-defined network routes
 - implement subnets
 - configure endpoints on subnets
 - configure private endpoints
 - configure Azure DNS, including custom DNS settings and private or public DNS zones
- Secure access to virtual networks
 - create security rules
 - associate a network security group (NSG) to a subnet or network interface
 - evaluate effective security rules
 - implement Azure Firewall
 - implement Azure Bastion
- Configure load balancing
 - configure Azure Application Gateway
 - configure an internal or public load balancer
 - troubleshoot load balancing
- Monitor and troubleshoot virtual networking
 - monitor on-premises connectivity

- configure and use Azure Monitor for Networks
- use Azure Network Watcher
- troubleshoot external networking
- troubleshoot virtual network connectivity
- Integrate an on-premises network with an Azure virtual network
 - create and configure Azure VPN Gateway
 - create and configure Azure ExpressRoute
 - configure Azure Virtual WAN

MODULE 5: Monitor and back up Azure resources (10-15%)

- Monitor resources by using Azure Monitor
 - configure and interpret metrics
 - configure Azure Monitor logs
 - query and analyze logs
 - set up alerts and actions
 - configure Application Insights
- Implement backup and recovery
 - create a Recovery Services vault
 - create and configure a backup policy
 - perform backup and restore operations by using Azure Backup
 - perform site-to-site recovery by using Azure Site Recovery
 - configure and review backup reports

Prerequisites

According to Microsoft, a candidate who wishes to take up the Microsoft Azure Administrator AZ-104 examination should have at least six months of hands-on experience in an Azure work environment which include:

- Azure services
- Azure workloads
- Security
- Governance

Other than that participants should also have experience of using Azure CLI, Azure portal, PowerShell, and Azure resource manager templates.

Target Audience

Candidates for this exam should have subject matter expertise in implementing, managing, and monitoring an organization's Microsoft Azure environment.

Responsibilities for this role include implementing, managing, and monitoring identity, governance, storage, compute, and virtual networks in a cloud environment, plus provision, size, monitor, and adjust resources, when needed.

An Azure administrator often serves as part of a larger team dedicated to implementing an organization's cloud infrastructure.

A candidate for this exam should have at least six months of hands-on experience administering Azure, along with a strong understanding of core Azure services, Azure workloads, security, and governance. In addition, this role should have experience using PowerShell, Azure CLI, Azure portal, and Azure Resource Manager templates.

Duration

32 Hours
