

Certified Penetration Tester (CPT)

Introduction

The Certified Penetration Tester (CPT) certification is developed for security professionals whose task involves the assessment of the target networks and systems to find security vulnerabilities. The CPT certification aims at training individuals in penetration-testing methods, legal issues circling penetration testing, and ways to properly conduct a penetration test, and it also includes the best technical and non-technical techniques in conducting a penetration test.

Course Highlights

This course teaches you about core aspects such as:

- Penetration Testing Types, Tools, and modes
- Penetration Testers
- Report Writing
- Ethical Hacking
- Information Gathering
- Bypassing Antivirus Applications
- Social Engineering
- Wireless Attacks

Course Outline

Module Information - 1	<ul style="list-style-type: none">• Module 1 - Foundation• Module 2 - Penetration Testing Method• Module 3 - Vulnerability Assessment• Module 4 - Penetration Testing Types• Module 5 - Penetration Testing Manual and Automated• Module 6 - Penetration Testing Tools
Module Information - 2	<ul style="list-style-type: none">• Module 7 - Infrastructure Penetration Testing• Module 8 - Penetration Testers• Module 9 - Report Writing• Module 10 - Ethical Hacking• Module 11 - Information Gathering• Module 12 - Exploitation
Module Information - 3	<p>Module 13 - Password Attacks Module 14 - Bypassing Antivirus Applications Module 15 - Social Engineering Module 16 - Wireless Attacks Module 17 - Mobile Hacking</p>

Prerequisites

The Certified Penetration Tester (CPT)® Certification has no pre-requisites.

Target Audience

The CPT™ certification is the most advanced penetration testing training in the Information Security industry for IT managers, security consultants, security analysts, IT professionals, network engineers, and anyone having prior ethical hacking knowledge.

Duration

15 to 20 Hours
